

# INTRODUCING: SECURE MESSAGING

IN DATA ROOMS FROM  
ADMINCONTROL

## How do you ensure **SECURE COMMUNICATION WITHIN THE TEAM?**

During a project the members of the seller team or buyer team(s) are likely to have topics they need to discuss within the team. Our experience is that this communication often takes place on non-secure channels, with the risk of jeopardizing the deal. **With Secure Messaging you can easily discuss with your team directly in the Data Room.**

### What is Secure Messaging?

The Secure Messaging module enables users of the Data Room to send and receive confidential messages within the platform. It's a hybrid between mail and chat, allowing users to communicate securely within their respective teams.

**Secure Messaging is purpose built to facilitate the communication related to a project within a buyer team OR a seller team.**

Secure Messaging **should not** be confused with our Q&A module, which allows for questions and answers between seller and buyer teams.

How to get started with

# SECURE MESSAGING

## Activation of Secure Messaging

Secure Messaging needs to be activated before use. Please contact your Client Manager for activation.

After activation, your inbox with secure conversations is available from **Messages** in the left sidebar on your home page.

## What is the cost of Secure Messaging?

The Secure Messaging module is included in our Data Room offerings free of charge.

## Help Centre
